                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                        The present invention describes a fused protein (1) prepared from a peptide containing a CTL (cytotoxic T imphocyte) epitope recognised by cytotoxic T calls and a protein containing the ATPase domain of a heat shock protein. Also described are: (1) a drug composition containing (1) as active ingredient; (2) a DNA encoding (1); (3) anexpression vector containing the DNA of (2); and (4) a transforman which can retain the expression vector of (3). (1) has cytostatic, immunostimulant and protein is useful as an active ingredient for drug inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as mactive ingredient sequence represents a specifically claimed heat shock protein is used in a fixed protein of the present inducer use in a fixed protein of the present inducer use in a fixed protein of the present induced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 3; Page 39-42; 72pp; Japanese.

This sequence represents the human heat shock protein LHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-2 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including

                                                                                                                                                                                                    susceptibility to neoplasia especially malignant neoplasia, and carcinomas of the breast. Gene or protein therapy of mutated H8C73 is performed by administration of native H8C73, and the transgenic mammal is useful as an experimental model for technical development of gene herapy. The H8C73 gene was transfected into call lines, which were introduced into test enimals. These enimals were injected with untransfected cells of a breast cancer ine. Expression of wild type H8C73 prevented breast cancer cells forming tumours in the mice. The present sequence represents mouse H8C73 from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  developed comprising detecting the aberrant expression of a gent
heat shock cognate 73 (HSC73) locus, or detecting a mutation at t
HSC73 locus. The method is used for diagnosing neoplasia or a

(2) and a recording (II) (3) an expression vector containing the DNA of (3) / ID NA coding III (3) an expression vector (3) / ID NA cytostatic laminum stimulant and the protein of (3) / ID NA cytostatic laminum response compositions are crivities and can be used as a cellular immune response inducer. The protein is useful as restain in information of containing the control of (3) / ID NA cytostatic laminum containing contai

THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHRAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE MONNATIVE COMPRESSES THROUGH THEIR ABILITY TO RECOGNIZE MONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY SIND EXTENDED PRIVIDE SECHENTS WITH A NET HIDROFHOBIC CHARACTER EXPOSED BY POLYBERTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.
